

# Managing Stress: *Relaxing Your Mind and Body*

NUP Allied Health – Psychology Services

# What is Stress?

- Stress is a common feeling we experience in response to a challenge or demand on the brain and body.
- Stress is part of everyday life and everybody experiences some level of stress.
- There are two types of stress, namely positive stress and negative stress.

## Types of Stress

### Positive Stress

- Positive stress is experienced when we are able to overcome the challenges we face physically, mentally and emotionally.
- Positive stress is not necessarily bad as it gives us the drive to cope and find solutions to our problems.

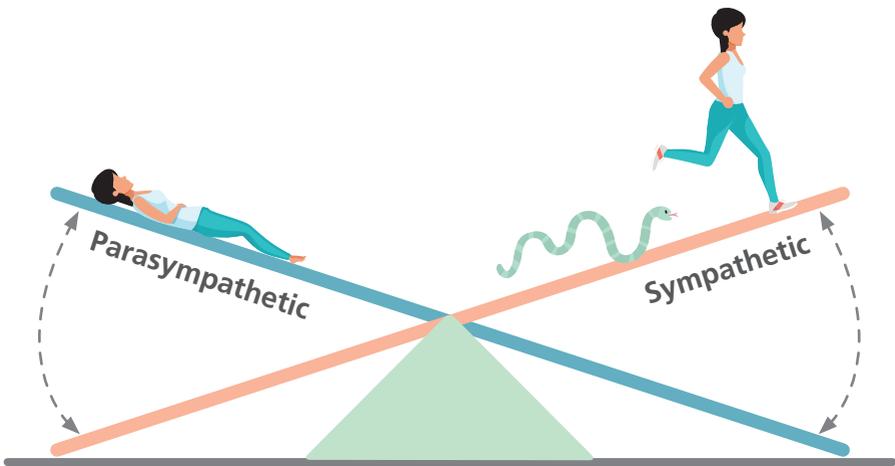

### Negative Stress

- Negative stress is experienced when we cannot cope with the challenges we face.
- Negative stress that goes on for a long time can be harmful to your health, relationships, and quality of life.

## Understanding How Our Body Responds to Stress

- Our nervous system is made up of many systems and certain systems are linked to the stress response.
- The **autonomic nervous system** (ANS) has a direct role in the human body's physical response to stress and is divided into the **sympathetic nervous system** (SNS) and the **parasympathetic nervous system** (PNS).
- The two nervous systems behave like a see-saw. When one side is dominant, the other is suppressed.

**Parasympathetic Nervous System (PNS)**  
activates the  
**Relaxation Response**

**Sympathetic Nervous System (SNS)**  
activates the  
**Stress Response**

# Recognising Symptoms of Stress

## Physical

*Muscle tension, aches or pains*

*Headaches*

*Fatigue/tiredness*

*Nausea*

*Stomach upset*

*Faster heart rate and/or breathing*

*Dizziness*

## Emotional

*Depression and a sense of worthlessness*

*Agitation and irritability*

*Anxiety*

*Restlessness*

*Feeling overwhelmed*

## Behavioural

*Withdrawal from activity (social, occupational, leisure)*

*Smoking or excessive drinking*

*Being defensive and argumentative*

*Poor appetite or increase in appetite*

*Crying*

*Sleep problems*

*Avoidance*

*Poor productivity*

## Cognitive

*Reduced creativity*

*Negative self-talk*

*Forgetfulness*

*Poor concentration*

*Negative attitude towards life and future*

*Mentally tired and preoccupied*

*Excessive worrying*

*Difficulties making decisions*

*Mental blocks*

# Common Sources of Stress

personal problems

work problems

relationship difficulties

academic pressure

health issues

financial problems

unemployment

caregiver's stress

death of loved one

unexpected or sudden bad news

daily hassles

## How Does Relaxation Help?

When you feel stressed, your body responds by releasing hormones that increase your blood pressure and raise your heart rate. This is called the stress response.

Learning how to relax helps you to relieve stress by lowering your blood pressure and heart rate. This is called the relaxation response.

## Relaxation Method

There are two exercises you can do to help you relax.

- » Diaphragmatic or Abdominal Breathing
- » Progressive Muscle Relaxation

### Diaphragmatic or Abdominal Breathing

You experience fast and shallow chest breathing when you are stressed. This causes the oxygen and carbon dioxide levels in your body to be out of balance. If this continues for a long period of time, you may experience symptoms such as fast and/or irregular heartbeat, shortness of breath, light-headedness, weakness, and numbness.

Breathing from your diaphragm/abdomen can help balance the oxygen and carbon dioxide blood levels in your body, regulate your heart rate, and reduce muscle tension and stress. It is more relaxing as compared to shallow chest breathing.

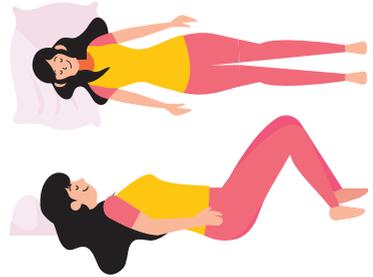

Steps for diaphragmatic breathing method:

- **Sit or lie down comfortably.**

If you are **seated**, remember to maintain a good posture with head comfortably balanced above the spine, arms and legs uncrossed, and feet placed firmly on the floor.

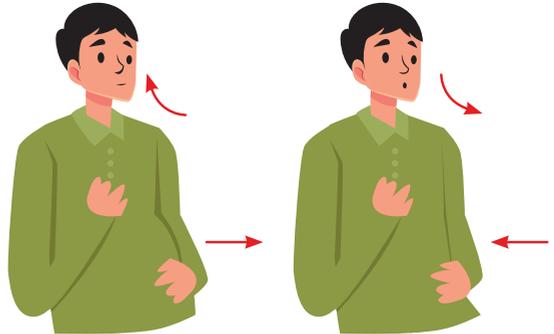

**Lie down**, with legs straight\* and slightly apart, arms at the side and not touching your body, palms facing up, and eyes closed.

*\*If you have back problems, bend the knees.*

- **Breathe in slowly through your nose.**

Notice how your abdomen rise as you breathe in deeply.

- **Breathe out slowly through your mouth**, as though you are breathing out through a straw. Notice how your abdomen falls when you breathe out.

- Practise diaphragmatic breathing for 5 to 10 minutes at a time, twice a day.

## Progressive Muscle Relaxation

Progressive relaxation of your muscles slows down your pulse rate, reduces blood pressure, as well as respiration rate. It helps you to release stress and tension in every part of your body, one muscle group at a time, which can help to calm your mind.

Steps for progressive muscle relaxation:

- » Get into a comfortable position, seated or lying down, in a quiet place. Begin to relax as you take a few slow, deep breaths.
- » Tense one muscle group at a time (without hurting yourself) for a few seconds, then release the tension.

## Progressive Muscle Relaxation

1

Scrunching your forehead... Hold... Release...

3

Clench your teeth hard... Hold... Release...

5

Hold your hands out and clench your fists... Hold... Release...

7

Tighten your stomach muscles... Hold... Release...

9

Straighten your legs and pull/flex your toes towards you... Hold... Release...

2

Squeeze your eyes tight... Hold... Release...

4

Bring your shoulders up towards your ears... Hold... Release...

6

Push your hands backwards and squeeze your shoulder blades together... Hold... Release...

8

Tighten your buttocks and thighs... Hold... Release...

10

Straighten your legs, point and curl your toes downwards... Hold... Release...

# My Relaxation Strategies

You may use the chart below to plan your own relaxation exercises.

<p>Diaphragmatic Breathing Exercises</p> 	<p>Progressive Muscle Relaxation</p> 	<p>Mindful Meditation</p> 
<p>Others</p>	<p>Frequency of practice:</p>	

## Self-soothing

<p>Sight </p>	<p>Smell </p>	<p>Sounds </p>
<p>Touch </p>	<p>Taste </p>	

# Enjoyable Hobbies and Activities

Reading

Listening to music/playing musical instruments

Watching movies

Playing video games

Sports

Gardening

Cooking/ Baking

Sewing/ art and craft

Photography

Social activities

Others

Frequency of practice:

**National University Polyclinics**
