

Pneumococcal disease

Pneumococcal disease is an infection caused by the *Streptococcus pneumoniae* bacterium. Infection can result in pneumonia, infection of the blood (bacteremia/sepsis), middle-ear infection (otitis media) or bacterial meningitis.¹⁵

TRANSMISSION¹⁶

Pneumococcal disease spreads when an infected person coughs or sneezes. Some children may not even feel sick but they could have the bacteria in their noses and throats. These children can still spread pneumococcal disease.

SIGNS & SYMPTOMS¹⁶

There are different types of pneumococcal disease. Symptoms depend on the part of the body it affects.

Pneumococcal pneumonia causes:

- Fever or chills
- Cough
- Rapid breathing or difficulty breathing
- Chest pain

Pneumococcal meningitis causes:

- Stiff neck or headache
- High fever
- Increased pain from bright lights
- Confusion

Blood infection causes:

- Fever
- Chills
- Low alertness

POSSIBLE COMPLICATIONS¹⁶

- Brain damage
- Disabilities like hearing loss, or loss of arms or legs
- Death
